

Article A1201 - Mind is loving all things equally

Before the reader can successfully pursue an understanding of numbers and geometry, he must appreciate that he is studying an integrated system, which is holographic in nature. Therefore, if there are distortions in the students thought pattern, it will affect the way that he views everything. True knowledge is not always easy, but it is doable. The biggest barrier to gaining access to this information is beliefs that are incorrect and crazy. So we will begin our discussion by addressing strange beliefs that many of us have. Another reason that I am starting with questioning belief systems is that there is an inherent belief system embedded in the understanding of numbers and geometry, and the way that they connect everything together. So unless you are prepared to evaluate your current belief system in this regard, you won't understand this thought system.

The circle symbolises the cosmic solution on the levels of intellect and spirit. It's heart is its centre. Therefore emotion is only compatible with mind and spirit when all things are loved equally.

A good example of this is the concept of love. How can we make love work, and how can we make love stay? The answer is not difficult, and yet we battle to grasp an idea that is almost child's play in its simplicity. Love, or the heart, is normally associated, and correctly so, with the centre. We talk about the heart centre. But the heart must be in line with a proper intellectual understanding. This will prevent us from loving that which will hurt us, and we all know how painful love can be.

The spiritual or intellectual solution to all things is the circle. Think of the artistic renditions of the Buddha and Jesus. They are often shown with a halo, which is a circle around their heads. This means that they are in tune with the knowledge of everything. They have overcome the contradictions in their thinking. So then, how do we make our feelings compatible or one with our thinking or spirit.

The heart in unity with the spirit (mind at peace) is found in the centre of the circle. The circle is defined with respect to its centre as follows:

The circle is a trace of points that are equidistant from its centre.

This means that in order to be in possession of our thinking or spiritual faculties, we must love (centre) everybody equally. If you do not love everybody equally, then the centre cannot construct the circle. Therefore the mind or spirit will appear not to function. You will think that you have lost your mind, which is a condition that accurately describes 'falling in love'. This comes about because we interpret love as special, or that there is someone special out there for us which we will love more than anybody else. As we know by experience, this special love is very volatile, and has driven many people crazy. The only type of love that has any reality is a love that loves everyone equally. Special love is not love at all. Rather, it appears to destroy love. So if you want to love somebody properly, love them the same as you love everyone else. This is how Mother Teresa found her way home, and regained the power of her mind once again.

William Shakespeare agreed with this, as he wrote about in Romeo and Juliet. Romeo and Juliet is an archetypal story of special love. From the moment they met, it was all downhill. It wasn't long before both of them were dead. Their deaths were the result of a whole series of errors, errors that could easily have been avoided. They died at the hand of these errors, because special love is itself an error.

The Biblical view is also about special love. God only loves those who accept his Son. There is some truth in this, as God knows that the circle (Sun, Son) solves all things. Therefore if we don't choose the circle as the intellectual solution, nothing will work out. But God hasn't abandoned anybody if they choose not to see how the circle (Son) solves everything. He still loves them and trusts that they will come to understand and then change their mind. His patience is limitless as he waits for everybody to return to right thinking.

The god in the Bible has chosen Israel as his special love. Even the central Biblical command is flawed - Thou shalt love the Lord your whole heart. This hints at special love. Rather the true God has chosen non-special love, where everything must be loved equally. This means the love of God must be the same as the love of anything else. If you love God more, then it is special love, and the heart (centre of circle) will not be able to construct the circle. This will result in losing access to the powers of the mind and spirit. The Laws of geometry, just like any law based on truth, must be consistent with the laws of psychology. So yes, love the lord your God with your whole heart, but also love everything else in the same way.

The perfection of the idea of non-special love is found in the simple and correct interpretation of the circle and its centre. So it is geometry that is at the basis of all psychological processes. Psychology is the correct description of geometry, in general terms.

Another very important idea that we need to get to grips with in our pursuit of numbers and geometry is that of illusion. We define illusion as anything that is contradictory or has opposites. Its symbol is the straight line, because the straight line is the simplest geometric element that has opposite ends. We can view these opposite ends as a positive pole and a negative pole. The straight line also connects these two extreme ends. This is symbolic of a short circuit, or a lightning strike, because if you short a positive and negative pole, you create an electrical short circuit. In mythology, the god Zeus symbolises this idea, as he is in charge of lightning. The straight line is therefore contradictory in nature, and is also symbolic of the ego or conflicted mind. It symbolises the world of illusion. We will be discussing this idea a great deal, because it is a very important one, from a geometric and numeric point of view. It ties in perfectly with the modern view of quantum mechanics, which is steering our thought system in the direction that there is no world out there, we only mistakenly think there is.
