

A1203 - The Diameter of the Earth - All Things being Equal

Prerequisite Information:

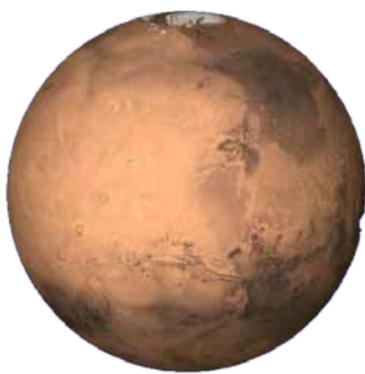

The number of the Sun and the number of the circle is six.

The number of the diameter is 5. Five is also the number that the ancients gave to the planet Mars. So, in a universal sense Mars is symbolic of the diameter of the circle.

The cosmic equation $A + B = 20$ tells us that 3 and 17 are coupled together, because $3 + 17 = 20$. This information is coupled with the Tarot cards, which means that the 3rd card, the High Priestess, is coupled to the 17th card, the Tower of destruction. The High Priestess is symbolic of the Earth, and Mars rules the Tower of Destruction Tarot card. The short of it is that the Earth and Mars are cosmically connected. This means that it is the diameter of the Earth that has universal significance. Make sure that you understand this, as it is extremely significant and will show you how the equation $A + B = 20$ is a cosmic one, when used in conjunction with the Tarot cards.

The pentagon is a regular 5 sided figure. If we make all the sides equal to 1 unit, then the diagonal is the well-known golden proportion, $\phi = 1.618$. As the pentagon is connected to number 5, then it must be associated with the planet Mars, because the ancients gave Mars the number 5.

The ancients gave Mars the number 5, which is also the number of the diameter of the circle. As Mars and Earth are a universal archetypal pair, it means that the diameter of the Earth has a very basic connection to the Sun, because the Sun is the solution for all 10 archetypal pairs.

The polar diameter of the Earth is 7900 miles. We can convert this to the number 79, because floating point arithmetic is tied up with the number 5, the number of the diameter.

The combination of Earth and Mars is ultimately a solar one, because the result of the cosmic equation $A + B = 20$ is the Sun, as the 20th Tarot card is called the Sun. The Sun is symbolised by the circle, which means that we must exercise the principle of equality, because it is equality that keeps the circle in unity with its centre. The simple act of making the circumference equal to the diameter will do all this for us. It will also unify Earth, Sun and Mars, because it is the diameter of the Earth that makes Mars one with the Sun, or equal to the Sun.

We can see this process in the diagrams below. We always use floating point arithmetic. We will discuss later that floating point arithmetic is a property of the number five, the diameter.

If we make the circumference of the circle equal to 7.9, which is the polar diameter of the Earth (floating point arithmetic, 7900 miles), then it is a simple matter to construct an angle of 23.44° , which is the exact tilt of the Earth's polar axis of rotation with respect to its motion around the Sun. We must just make sure that the one sides of the right angled triangle is equal to 1.0, or unity, as all things come from unity. But an angle of 23.44° as an arc on the Earth's surface is equal to 1618 miles, which is the numerical equivalent of the golden proportion, $\phi = 1.618$., again using floating point arithmetic.

This relatively simple example has massive ramifications to the way we view the universe. It is seriously suggesting that our current scientific approach is in dire need of re-evaluation. If it is so easy to determine why the Earth's axis is tilted at the angle it is, then the only conclusion that we can draw with respect to our current approach is that our science is designed to make sure we never find anything substantial out. It's a case of 'Seek and do not find'!

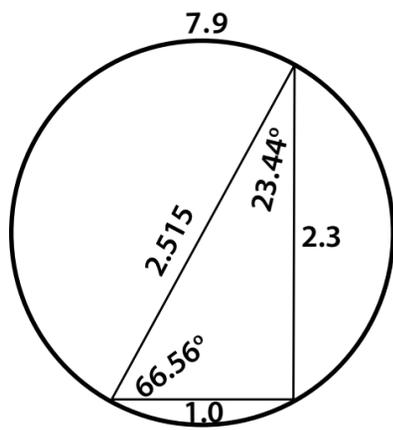

This approach is also a subtle blend of mysticism, psychology, religion, mythology, geometry, numbers and mathematics. It is in fact a unity of all things. By using this approach as a basis, are we on the way to discovering the knowledge of unity that has so eluded us for so long?

There are many things that we will have to clarify, such as why does it only work with miles and degrees of arc. Also, why did we introduce a right angled triangle?

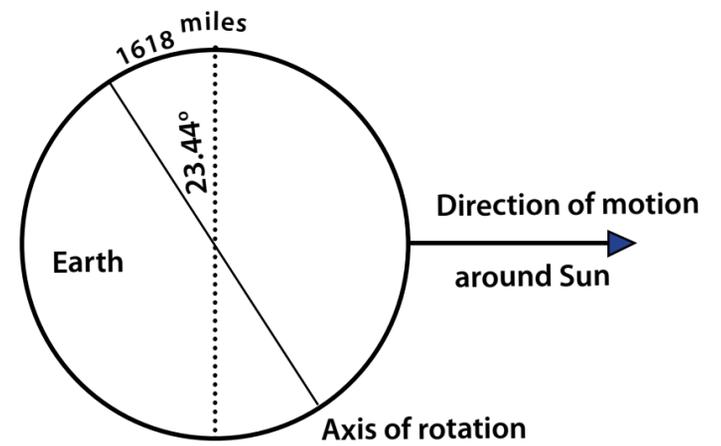

There is obviously a whole system of knowledge that is missing here. But it is more beneficial to restore a system which works than to continue with a scientific approach which is full of contradiction. In fact the modern scientific approach may be flawed in its very source. Take Newton's 3rd Law, which says that for every action there is an equal and opposite reaction. Think about the psychology of this. It means that when you do good, the consequence is evil. It also means that if you want to attract something, then run away from it. These are laws of contradiction and insanity. These are laws that appear to operate in the physical world. No wonder Jesus said we must renounce the world. The Buddha was also very insistent that this world is all illusion.

See diagrams on next page.

The polar diameter of the Earth is 7900 miles. If we make the circumference of the circle equal to 7.9, then we are unifying diameter and circumference. This will only work simply in this case, because the Earth is archetypally connected to Mars, symbolised by the diameter), and together they result in reaching the Sun. The Sun's symbol is the circle, the cosmic solution of all things. If we construct a right angled triangle on the diameter, whose side is 1 unit, we end up with the exact angle that the Earth's axis of rotation makes to its direction of motion around the Sun, namely 23.44°

The Earth's axis of rotation is inclined at an angle of 23.44° to the direction of its motion about the Sun. Using a value very close to the mean circumference of the Earth (24881 miles), namely 24860 miles, we see that 23.44° of arc on the Earth's surface is 1618 miles. This is numerically equal to the golden proportion $\phi = 1.618..$ As this ratio comes from the pentagon, which has 5 sides, and as 5 is the number of Mars, it makes perfect sense that the polar diameter of the Earth is tilted at an angle that equals the ratio $\phi = 1.618..$ (floating point)
